The England international limped off after coming on as a substitute at Selhurst Park and will undergo scans tomorrow in Manchester. Jurgen Klopp's first-team return is expected to be confirmed in a Liverpool statement on Thursday. Oxlade-Chamberlain missed the Reds' 2-0 loss to Stoke City last week due to the injury. The midfielder has been in superb form this season. He has scored three goals and provided four assists in 13 appearances. Trent Alexander-Arnold and Joe Gomez have featured on the flanks in Oxlade-Chamberlain's absence.Q: How to test an app with 2 network adapters (on the same machine)? I am having some trouble testing my android application. I have written a test which uses an emulator. The network I am testing is a wifi network. So when I run my test the emulator tries to connect to wifi and fails (it gets a message that it can't connect to wifi). What is the best way to test this scenario? I have two networks

abriendo puertas ampliando perspectivas answer keyThe Real World to Recruit AI Assistants – From Apps to Bots This is an interesting idea. To be sure there's a bit of bull in the china shop here, but don't think for a moment that we will be able to keep all of our tech under wraps in the age of the cloud. Google Glass and smartphones are just the beginning. So AI assistants don't work as well as we would expect at the moment. But it's not too surprising. How often have we heard or seen a computer do something wrong? Some day it will be commonplace to have a computer do things that are even as mundane as not being able to remember the date and time! What about AI assistants in the cloud that allow users to access all of their data? Are they any better than having AI assistants on a phone? It's hard to imagine that's going to be the case, but then it's just one aspect of the future. Another can be that you can build AI assistants into apps. The point of this isn't to tell you that apps are the way to go. I doubt it. It's just a thought experiment. I think the truth is that we are at the end of a generation of technology. The next generation will be vastly more different than what we have seen. The Real World to Recruit AI Assistants – From Apps to Bots AI assistants have become commonplace and it's easy to see why. The alternative would be a virtual assistant. This is already a reality and the number of jobs that have been taken over by AI assistants is growing. Just think for a moment about the words Google Wave. I'm sure that's where Google was heading when it first appeared. It wasn't mainstream and the technology wasn't even released for another eight years. You just had to be there to experience it. Google doesn't sell technology it sells ideas and the technology itself is a tool for Google to foster ideas. The real world had to recruit AI assistants – From apps to bots I see this as the next phase. You can use an app that is similar to Google Wave, but much improved, and it becomes a tool for ideas and communication. Here's what this means: When 2d92ce491b
